

GENERAL CONVEYOR

DESCRIPTION

The **general conveyor** is designed for **the automatic transport of fruits and vegetables** between different machines or stations within the post-harvest line. It allows a continuous and safe flow of the product, reducing manual handling and optimizing the efficiency of the line.

There are **different types of conveyors**, adapted both for the **movement of loose fruit** and for the **transport of boxes**, ensuring flexibility according to production needs and the type of installation.

Its robust and modular construction facilitates integration with other machines and handling systems, offering reliable and low-maintenance operation.

FEATURE

Other features:	Conveyors using belts, chains or special conveyors. Custom design.
Main Function:	Automatic transport of fruit and vegetables
Types of transport:	Loose fruit/vegetables and boxes
Application:	Post-harvest lines for citrus fruits and other fruits
Construction:	Sturdy metal frame and easy cleaning
Online Integration:	Compatible with other processing and packaging machines
Main Advantage:	Continuous, safe and efficient flow, minimizing manual handling
