

## MESH DISC

### DESCRIPTION

The **mesh disc** is a piece of equipment designed for the **reception and controlled accumulation of meshes or baskets already made with fruit**, keeping them moving by means of a constant rotation.

This system avoids disorderly accumulation at a single point, facilitating pick-up by the operator and optimising the workflow on the packaging line. Its smooth and continuous operation helps to keep the product in good condition, improving efficiency in the final stages of packaging.

It is a **compact, reliable and low-maintenance equipment**, ideal for integration at the end of the fruit and vegetable packaging line.

## **FEATURES**

<b>Voltage:</b>	380/220V III (220 V Single Phase Low Drive)
<b>Main Function:</b>	Reception and accumulation of ready-made meshes or baskets
<b>Working System:</b>	Constant spinning keeps product moving
<b>Application:</b>	Citrus or other fruit nets and baskets
<b>Construction:</b>	Robust structure, easy cleaning and maintenance
<b>Online Integration:</b>	Placement at the end of the confection line
<b>Main Advantage:</b>	Prevents accumulation at a single point, improves workflow
